Standard with Protected Memory	PLC-5/26	1785-L26B	16K	512	1 DH+ and 1 DH+ or Remote I/O (Adapter or Scan)
	PLC-5/60	1785-L46B	48K	2048	4 DH+ or Remote I/O (Adapter or Scan)
	PLC-5/86	1785-L86B	100K	3072	4 DH+ or Remote I/O (Adapter or Scan)
ControlNet	PLC-5/20C	1785-L20C15	16K	512	1 ControlNet (dual media) and 1 DH+
	PLC-5/40C	1785-L40C15	48K	2048	1 ControlNet (dual media) and 2 DH+ or Remote I/O (Adapter or Scan)
	PLC-5/80C	1785-L80C15	100K	3072	1 ControlNet (dual media) and 2 DH+ or Remote I/O (Adapter or Scan)
ControlNet with Protected Memory	PLC-5/46C	1785-L46C15	48K	2048	1 ControlNet (dual media) and 2 DH+ or Remote I/O (Adapter or Scan)
Ethernet	PLC-5/20E	1785-L20E	16K	512	1 Ethernet, 1 DH+ and 1 DH+ or Remote I/O (Adapter or Scan)
	PLC-5/40E	1785-L40E	48K	2048	1 Ethernet, 2 DH+ or Remote I/O (Adapter or Scan)
	PLC-5/80E	1785-L80E	100K	3072	1 Ethernet, 2 DH+ or Remote I/O (Adapter or Scan)

Introduction

1785 PLC-5 Programmable Controller: The Foundation of Control Architecture

The PLC-5® controller stands at the center of a control architecture that brings together existing and future systems by means of networks such as EtherNet/IP™, ControlNet™ and DeviceNet™, and offers connectivity among SLC™ 500 and ControlLogix® and MicroLogix™ controllers. Because they include embedded network connections, PLC-5 controllers enable your control architecture to be flexible enough to include cost-effective connections to a wide range of devices.

PLC-5 System Overview

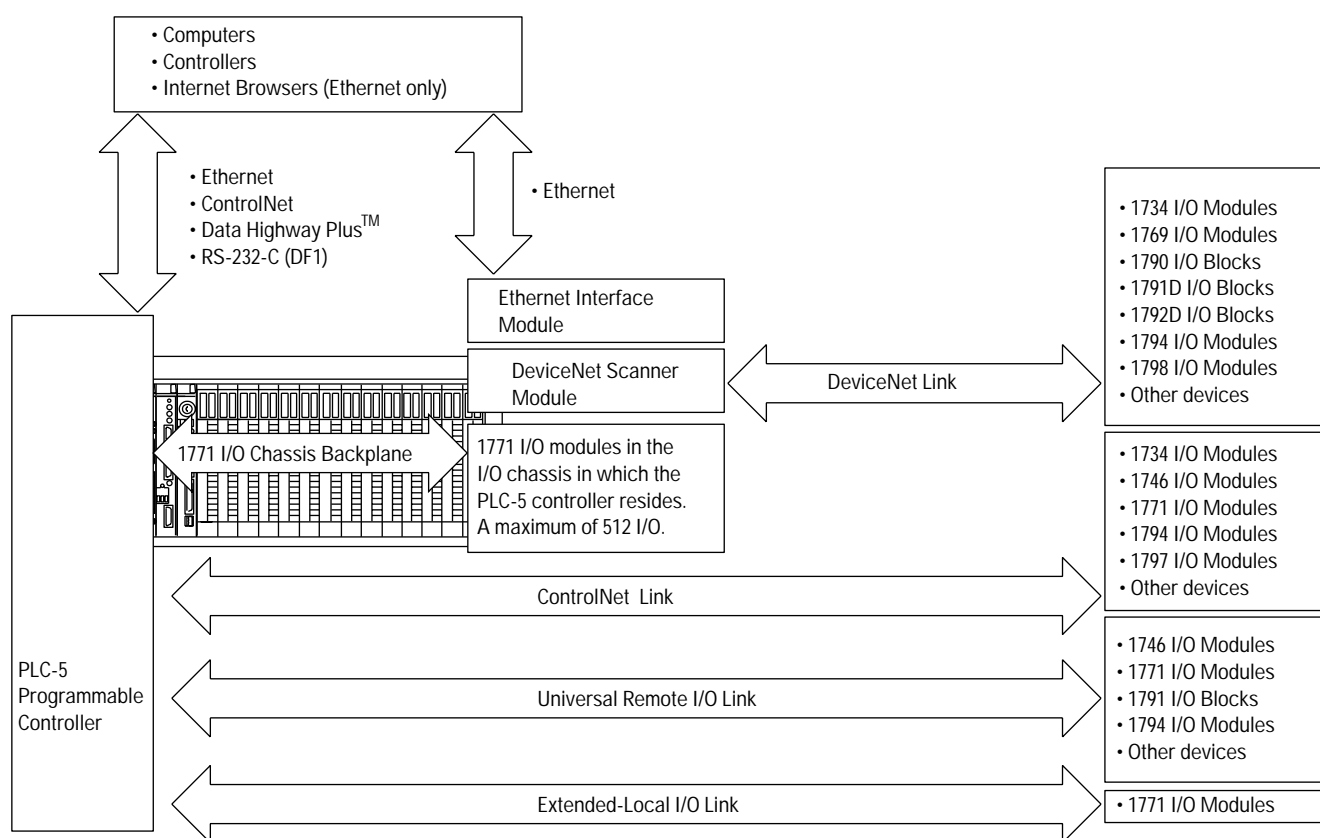

A PLC-5 / 1771 control system, at minimum, consists of a programmable controller module and I/O modules in a single 1771 chassis with a power supply. You choose the controller with the on-board communication ports you need.

A simple system can consist of only a stand-alone controller and I/O modules all in a single chassis

On-board Universal Remote I/O scanner ports are available on all PLC-5 controllers. On-board extended-local I/O scanner ports are available on some PLC-5 controllers. On-board ControlNet ports are available on some PLC-5 controllers. To provide a DeviceNet I/O scanner port to the system, you must add a DeviceNet scanner module (1771-SDN).

In the typical configuration illustration, a ControlNet port on the processor module interfaces the processor to the ControlNet link. In each of the two chassis remote from the processor, a 1771-ACN15 I/O adapter module provides I/O modules in those chassis with an interface to the ControlNet link. In this configuration, the PLC-5 processor monitors/controls the I/O in its local I/O chassis as well as the I/O in the remote locations.

You plug a 1771 power supply module into an I/O module slot, or connect a stand-alone 1771 power supply into the left end of each chassis.

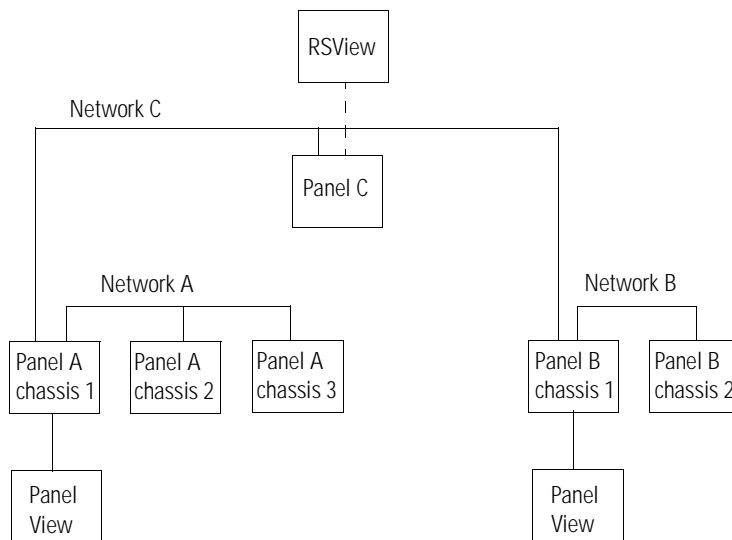

Depending on the communication ports available on your particular PLC control system, you can select operator interfaces that are compatible with those particular ports.

Lay Out the System

Lay out the system by determining the network configuration and the placement of components in each location. Decide at this time whether each location will have its own controller.

Place each controller's I/O on an isolated network to maximize the performance and to more easily accommodate future network or system configuration changes. If you plan to share I/O, make sure the I/O is on a network that each controller can access.

Assume that Network A and Network B both require a controller and its I/O. Both controllers interact with time critical information.

For a PLC-5 controller to control I/O modules, both the controller and the I/O modules must be directly attached to the same network.

I/O Location	Controller in Panel A, chassis 1	Controller in Panel B, chassis 1
Panel A, chassis 1	yes	yes
Panel A, chassis 2	yes	no
Panel A, chassis 3	yes	no
Panel B, chassis 1	yes	yes
Panel B, chassis 2	no	yes
Panel C, chassis 1	yes	yes

Evaluate what communications need to occur between controllers. If there is sporadic information that is not time-critical, use a message-based network such as an EtherNet/IP (the information portion), Data Highway Plus™, or the unscheduled portion of the ControlNet network. If the information is time-critical, such as producer/consumer tags between controllers, use the ControlNet or EtherNet/IP network.

Applying Backup Solutions

The ControlNet hot backup module (1785-CHBM) provides backup of ControlNet I/O. A secondary controller qualifies critical control information with the primary controller. Both controllers consume information from inputs and connect to outputs, but only the primary controller controls the outputs. The secondary controller establishes control of outputs if the primary controller shuts down. For more information, see page 23.

The PLC-5 Backup Communication Module (1785-BCM) helps increase the fault tolerance of PLC-5 programmable controller systems controlling I/O on a Universal Remote I/O link by providing backup of the PLC-5 programmable controller.

Cat. No.	Connections	Customer Relay	Design Considerations	Power Dissipation	Backplane Current Load
1785-BCM	1771-WG wiring arm (included)	0.25A @ 24V dc (resistive)	Place in local I/O chassis	10W maximum	1A

Use the following checklist as a guide to completing your own system specification. The inside of the back cover of this selection guide is a worksheet you can use to record your selections.

Selecting I/O Modules

Step 1 - Select:

- 1771 I/O Modules
- 1746 I/O Modules
- 1794 FLEX I/O Modules
- 1797 FLEX Ex I/O Modules
- 1791D CompactBlock I/O Modules
- Encompass Partner Program I/O Modules

Rockwell Automation® offers many types of I/O modules and has more than 3 million modules installed in applications worldwide. Rockwell Automation offers chassis-based and both block and modular distributed modules.

The following sections outline the available I/O modules. For more information about these I/O modules, see the *Allen-Bradley I/O Module Brochure*, publication ACIG-BR002 or visit the Rockwell Automation Distributed I/O website at: www.ab.com/io.

If Your Application Requires Preferred I/O for PLC-5, and	Use this Type of I/O	On Any of these Networks
<ul style="list-style-type: none"> • native I/O providing highest performance • is chassis-based and needs to accommodate a wide range of I/O types • controls an entire process • is a master/slave configuration for distributed control 	1771 I/O see page 8	<ul style="list-style-type: none"> - ControlNet - Universal Remote I/O - Extended Local I/O
If Your Application	Use this Type of I/O	On Any of these Networks
<ul style="list-style-type: none"> • is chassis-based and requires different types of I/O • has smaller size requirements than 1771 • communicates with SLC controllers 	1746 I/O see page 13	<ul style="list-style-type: none"> - ControlNet - Universal Remote I/O - Extended Local I/O
<ul style="list-style-type: none"> • has distributed control that requires multiple types of I/O devices near a machine 	1794 FLEX™ I/O see page 14	<ul style="list-style-type: none"> - EtherNet/IP - ControlNet - DeviceNet - Universal Remote I/O - Extended Local I/O - PROFIBUS DP
<ul style="list-style-type: none"> • has distributed control in a hazardous area 	1797 FLEX Ex™ I/O see page 15	<ul style="list-style-type: none"> - ControlNet via bus isolator - DeviceNet - Universal Remote I/O
<ul style="list-style-type: none"> • requires rackless design with panel or DIN-rail mounting • requires modular, high-density I/O 	1769 Compact I/O™ see page 15	<ul style="list-style-type: none"> - DeviceNet - Local I/O
<ul style="list-style-type: none"> • has distributed control • must have I/O mounted near sensors or actuators • uses motor starters, solenoids, or indicators 	1791D I/O CompactBlock I/O™ see page 16	<ul style="list-style-type: none"> - DeviceNet - Remote I/O - PROFIBUS DP

1771 I/O Modules

The 1771 series I/O modules offer digital, analog, and special-requirement modules. The 1771 I/O modules feature a wide range of:

- signal interfaces to ac and dc sensors and actuators
- I/O densities with as many as 32 I/O points per module
- signal levels, including standard analog inputs and outputs and direct thermocouple and RTD temperature inputs

PLC-5 controllers support 1771 I/O over these networks:

- Local I/O
- Universal Remote I/O
- Extended-local I/O
- ControlNet

When you select 1771 I/O modules, you must also select:

- chassis
- power supply
- adapter module (if in remote chassis or extended-local chassis)

1771 Digital Input Modules

Category	Cat. No.	Inputs and Outputs	Voltage	Backplane Current Load

1746 I/O Modules

The 1746 I/O modules (SLC 500 I/O) provide a cost-effective Universal Remote I/O option. Use an SLC 500 Universal Remote I/O module (1747-ASB) or ControlNet adapter module (1747-ACN15 or -ACNR15) to directly interface 1746 I/O modules to the PLC-5 system. The 1746 I/O modules feature:

- high-density, 32-point and combination modules, which reduce rack size and panel space requirements
- removable terminal blocks and 16-point modules, which simplify wiring and replacing modules
- industrial design, including input filtering and optical isolation

PLC-5 controllers support 1746 I/O over these networks:

- Universal Remote I/O
- ControlNet

When you select 1746 I/O modules, you must also select:

- chassis
- power supply
- cabling components
- adapter module (if in remote chassis or extended-local chassis)

For more information, see the following publications:

Publication Title	Publication Number
SLC 500 System Overview	1747-SO001

1794 FLEX I/O Modules

FLEX I/O is a cost-effective, flexible, modular I/O system for distributed applications and offers all the functions of larger rack-based I/O without the space requirements. You can independently select the I/O type, termination and network, appropriate for your specific application. This means one I/O product line can fit all your needs. The 1794 FLEX I/O modules feature:

- modular design, which reduces costs by solving a large range of application requirements with one I/O architecture
- small size, which reduces packaging costs
- individual wire termination locations, which reduce purchasing costs and complexity, as well as packaging costs
- diagnostics and Removal and Insertion Under Power (RIUP), which lowers the mean time to repair equipment and leverages your control investment
- flexible communications, which helps to control future costs by providing an economical migration path

PLC-5 controllers support 1794 I/O over these networks:

- Universal Remote I/O
- ControlNet
- DeviceNet
- EtherNet/IP

For more information about 1794 FLEX I/O, see the *FLEX I/O and FLEX Ex I/O Selection Guide*, publication 1794-SG002.

1797 FLEX Ex I/O Modules

The 1797 series I/O modules (FLEX Ex I/O) is a flexible, I/O system that mounts directly to the controlled equipment in a hazardous area. This eliminates the need for intrinsically safe (IS) barriers/isolators and separation of control and process. Additionally, the modules:

- offer modularity for distributed intrinsically-safe systems
- have dual-fault protection intrinsically-safe circuits that provide high fault tolerance
- have I/O circuitry that provides full Intrinsic Safety (IS) field-device protection

PLC-5 controllers support 1797 I/O over these networks:

- Universal Remote I/O
- ControlNet
- DeviceNet

When you select 1797 FLEX Ex I/O modules, you must also select:

- adapter module and cabling components
- bus isolator module and cabling components
- terminal base unit
- DIN rail
- power supply

For more information about 1794 FLEX I/O, see the *FLEX I/O and FLEX Ex I/O Selection Guide*, publication 1794-SG002.

1791D CompactBlock I/O Modules

The 1791D I/O modules (CompactBlock I/O) are designed for applications that require I/O to be distributed close to sensors and actuators or to be placed in small enclosures. The modules feature:

- self-contained package that provides cost-effective distribution of up to 32 points per node
- small size that lets you install in shallow and confined areas
- hardware watchdog circuit
- DeviceLogix™ Smart Component Technology provides limited I/O logic for intelligent I/O block

PLC-5 controllers support 1791D I/O over these networks:

- Universal Remote I/O
- DeviceNet
- PROFIBUS DP

When you select 1791D I/O modules, the I/O circuits, a built-in power supply, and a Universal Remote I/O adapter are included. You must select an enclosure and cabling components.

For more information about 1791D CompactBlock I/O, see the *1791D Block I/O Technical Data*, publication 1791D-TD001.

Additional I/O Selections

The Encompass Partners Program, Rockwell Automation's third-party product referencing program, builds on the strengths of our products.

As a technology-sharing program, Encompass is product-based and application-focused. Encompass allows third-party companies to provide functionality not delivered in Rockwell Automation products. The following table lists additional I/O choices that are part of the Encompass program.

Products	Encompass Partner
<ul style="list-style-type: none"> • 1771 LDT Interface Module • 1771 Programmable Limit Switch • 1771 Resolver Interface Module 	Advanced Micro Controls, Inc.
Gemco Series 1771 PLS	Ametek Automation and Process Technologies
1771 GPS Time Stamp Module	Hiprom Ltd.
Dial Up and Leased Line Modems	Miille Applied Research Company, Inc.
Fiber Optic Modems	Weed Instrument
PLC-5 Scanners for: <ul style="list-style-type: none"> • Interbus-S • ASi • PROFIBUS DP 	Woodhead
1771-WS Weigh Scale Module	Hardy Instruments
Optical Comm Modules for: <ul style="list-style-type: none"> • Ethernet • ControlNet • DF-1 • Data Highway • DH-485 • Modbus™ • RS-232 • RS-485 	Phoenix Digital Corporation
<ul style="list-style-type: none"> • "C" Programmable Solutions • AGA/API Flow Computers • HART • Honeywell DE Interface • Modbus Plus™ Communications-PLC • PLC Protocol Solutions • PLC Protocol Solutions-MVI 	ProSoft Technology, Inc.
<ul style="list-style-type: none"> • High-Density 32 Analog Input Module • Isolated AC 16 Triac Output Module • Isolated AC/DC 16 Input Module 	Spectrum Controls, Inc.

For more detailed information, refer to the Encompass product directory, publication 6873-QR003, or see www.automation.rockwell.com/encompass.

Notes

Selecting Network Communications

Step 2 - Select:

- EtherNet/IP Protocol
- ControlNet Network
- DeviceNet Network
- Serial Network
- Data Highway Plus
- Universal Remote I/O

Use specific PLC-5 controllers with network connections and install multiple communication modules into the PLC-5 backplane to route control and information data between the different networks.

The networking capabilities, led by EtherNet/IP network, ControlNet network, and DeviceNet network, allow information exchange between a range of devices and computing platforms and operating systems. PLC-5 controllers come with different network connections. Choose the network(s) that best meets your needs.

NetLinx Architecture

NetLinx open network architecture is the Rockwell Automation strategy of using open networking technology for seamless, top-floor to shop-floor integration. The networks in the NetLinx architecture - DeviceNet, ControlNet and EtherNet/IP - speak a common language and share a universal set of communication services. NetLinx architecture, part of the Integrated Architecture, seamlessly integrates all the components in an automation system from a few devices on one network to multiple devices on multiple networks including access to the Internet - helping you to improve flexibility, reduce installation costs and increase productivity.

- EtherNet/IP is an open industrial networking standard that supports implicit and explicit messaging and uses commercial, off-the-shelf Ethernet equipment and physical media.
- ControlNet allows intelligent, high-speed control devices to share the information required for supervisory control, work-cell coordination, operator interface, remote device configuration, programming and troubleshooting.
- DeviceNet offers high-speed access to plant-floor data from a broad range of plant-floor devices and a significant reduction in wiring..

Selecting a Network

You can configure your system for information exchange between a range of devices and computing platforms and operating systems.

If Your Application Requires	Use this Network	Select
<ul style="list-style-type: none"> high-speed data transfer between information systems and/or a large quantity of controllers Internet/Intranet connection program maintenance 	EtherNet/IP network	<ul style="list-style-type: none"> 1785-L20E controller 1785-L40E controller 1785-L80E controller or Applicable PLC-5 with 1785-ENET interface module
<ul style="list-style-type: none"> high-speed transfer of time-critical data between controllers and I/O devices deterministic and repeatable data delivery program maintenance media redundancy or Intrinsic Safety options 	ControlNet network	<ul style="list-style-type: none"> 1785-L20C15 1785-L40C15 1785-L80C15
<ul style="list-style-type: none"> connections of low-level devices directly to plant floor controllers, without the need to interface them through I/O modules more diagnostics for improved data collection and fault detection less wiring and reduced start-up time than a traditional, hard-wired system 	DeviceNet network	PLC-5 controller with 1771-SDN scanner module
<ul style="list-style-type: none"> plantwide and cell-level data sharing with program maintenance 	Data Highway Plus	All PLC-5 controllers have at least one built-in, configurable Data Highway Plus channel
<ul style="list-style-type: none"> connections between controllers and I/O adapters distributed controllers so that each controller has its own I/O and communicates with a supervisory controller 	Universal Remote I/O	All PLC-5 controllers have at least one built-in, configurable Universal Remote I/O channel
<ul style="list-style-type: none"> modems messages that send and receive ASCII characters to or from devices such as ASCII terminals, bar code readers, message displays, weigh scales, or printers supervisory control and data acquisition (SCADA) 	serial network	All PLC-5 controllers have one built-in serial port configurable for RS-232, RS-423 or RS-422A

EtherNet/IP Protocol

Ethernet/IP is an open industrial networking standard that supports implicit messaging (real-time I/O messaging), explicit messaging (messaging exchange), or both and uses commercial off-the-shelf Ethernet communication chips and physical media.

Additionally, EtherNet/IP uses the protocols used by the internet. Both the PLC-5 and Ethernet Interface Module (1785-ENET) contain features that allow you to use the Internet to access product information and to create and enhance application diagnostics.

Ethernet PLC-5 Controllers

Cat. No.	Max. User Memory (words)	Total I/O Maximum	Channels	Maximum Number of I/O Chassis				Cable	Power Dissipation Max.	Backplane Current Load
				Total	Extended -Local	Remote	ControlNet			
1785-L20E	16K	512 any mix or 512 in + 512 out (complement)	1 Ethernet 1DH+ 1 DH+/remote I/O	13	0	12	0	5810-TC02 or 5810-TC15	18.9W	3.6A
1785-L40E	48K	2048 any mix or 2048 in + 2048 out (complement)	1 Ethernet 2 DH+/remote I/O	61	0	60	0	5810-TC02 or 5810-TC15	18.9W	3.6A
1785-L80E	100K	3072 any mix or 3072 in + 3072 out (complement)	1 Ethernet 2 DH+/remote I/O	65	0	64	0	5810-TC02 or 5810-TC15	18.9W	3.6A

PLC-5 Ethernet Interface Module

The PLC-5 Ethernet Interface Module (1785-ENET) is a single-slot module that attaches to the side of any Enhanced PLC-5 series B or later controller, Ethernet PLC-5 controller, or ControlNet PLC-5 controller to provide additional Ethernet connectivity.

Cat. No.	When Used with	The Interface Module Provides
1785-ENET	Ethernet PLC-5 controller	additional Ethernet connectivity by supporting dual Ethernet links
	Enhanced PLC-5 controller	Ethernet connectivity without sacrificing DH+ or Universal Remote I/O ports
	ControlNet PLC-5 controller	dedicated Ethernet connectivity for plant and office integration

Using the Ethernet Interface Module’s built-in communication capabilities, your entire enterprise can use standard Ethernet or Internet connectivity to control and monitor production. Using the Internet and Web browser, you can create your own custom Web pages to provide executive summaries of process information. These pages are accessible to any Internet user who has network access to the PLC-5 controller. The embedded Web server provides access to PLC-5 diagnostics. Domain Name Service (DNS) and Simple Network Management Protocol (SNMP) are also supported.

Cat. No.	Comm. Rate	Connections	Design Considerations	Cable	Power Dissipation, Max.	Backplane Current Load
1785-ENET	10 Mbps	64 TCP/IP connections 512 unsolicited definitions per module	Place in I/O chassis second left-most slot attached to controller	1785-TC02 or 1785-TC15	11.5W	2.2A

ControlNet Network

ControlNet PLC-5 controllers offer embedded ControlNet communication capabilities for control and information processing. The ControlNet network provides both I/O control and peer-to-peer communications on a 5Mbps network, with repeatability and determinism.

You can have multiple ControlNet PLC-5 controllers on one ControlNet network, with each controller handling its own I/O on the network, and at the same time communicating with each other. Multiple controllers can receive input data from one I/O or device node.

ControlNet PLC-5 Programmable Controllers

Cat. No.	Max. User Memory (words)	Total I/O Maximum	Channels	Maximum Number of I/O Chassis			ControlNet I/O Map Entries	Cable	Power Dissipation Max.	Backplane Current Load
				Total	Extended	Remote -Local				
1785-L20C15	16K	512 any mix or 512 in + 512 out (complement)	1 ControlNet 1 DH+ 1 DH+/remote I/O	77	0	12	64	1786-CP	15.8W	3.0A
1785-L40C15	48K	2048 any mix or 2048 in + 2048 out (complement)	1 ControlNet 2 DH+/remote I/O	125	0	60	96	1786-CP	15.8W	3.0A
1785-L46C15 Protected	48K	2048 any mix or 2048 in + 2048 out (complement)	1 ControlNet 2 DH+/remote I/O	125	0	60	96	1786-CP	15.8W	3.0A
1785-L80C15	100K	3072 any mix or 3072 in + 3072 out (complement)	1 ControlNet 2 DH+/remote I/O	125	0	92	128	1786-CP	15.8W	3.0A

ControlNet Communication Adapters

Cat. No.	Function	Comm. Rate	Design Considerations	Cable	Power Dissipation, Max.	Backplane Current Load
1771-ACN15, -ACNR15	Interfaces 1771 I/O modules in an 1771 chassis to a ControlNet scanner port across a ControlNet network	5 Mbps	Place in remote ControlNet chassis. Requires a ControlNet PLC-5 controller.	Quad shield RG-6 coaxial cable	5.2W	1.0A
1747-ACN15, -ACNR15	Interfaces SLC I/O modules in an SLC chassis to a ControlNet scanner port across a ControlNet network	5 Mbps	Requires a remote ControlNet PLC-5 controller.	Quad shield RG-6 coaxial cable	5W	900mA
1794-ACN15, -ACNR15	Interfaces FLEX I/O modules in FLEX rack to a ControlNet scanner port across a ControlNet network	5 Mbps	Requires a remote ControlNet PLC-5 controller.	Quad shield RG-6 coaxial cable	3.4W	640mA

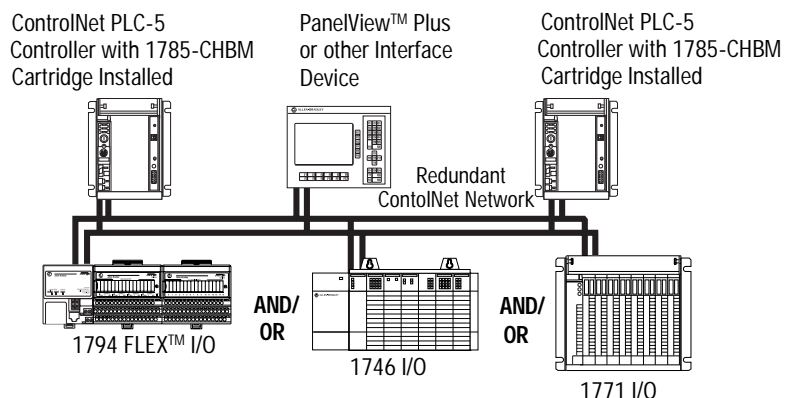

ControlNet Hot Backup Module

The ControlNet hot backup module provides backup of ControlNet I/O. A secondary controller qualifies critical control information with the primary controller. Both controllers consume information from inputs and connect to outputs, but only the primary controller controls the outputs. The secondary controller establishes control of outputs if the primary controller shuts down.

ControlNet Hot Backup Basic System

Cat. No.	Quantity	Description
1785-CHBM	2	ControlNet Hot Backup Modules
1785-L40C15/F or 1785-L80C15/F*	2	ControlNet PLC-5 Programmable Controllers, Series F or later
1771-A1B thru -A4B	2	1771 I/O Chassis
1771-P4 thru -P10	2	1771 Power Supplies
1771-ACN or 1747-ACN or 1794-ACN	1	ControlNet Adapter
1784-KTCX15 or 1784-PCC card	1	Communication card for personal computer or laptop computer
9234 Series	1	RSLogix™ 5 Programming Software (release 3.22 or later)
9357-CNETL3	1	RSNetWorx™ for ControlNet™ Software (release 1.80.xx or later)
9234 Series	1	RSLink Gateway™ Communication Software (release 2.00.97.30 or later)
Other System Requirements		ControlNet network cables, taps and terminators for connections between the PLC-5 controllers and I/O adapters
* Both controllers must have the same series and firmware revision		

DeviceNet Network

1771-SDN DeviceNet Scanner Module

The scanner module acts as an interface between DeviceNet devices and a PLC-5 controller. The scanner module communicates with DeviceNet devices over the network to:

- read and write inputs and outputs to and from a device
- download configuration data to a device
- monitor operational status of a device

The scanner module is a single-slot module that resides in a 1771 I/O chassis that either contains a PLC-5 controller or is on an extended-local I/O link, universal remote I/O link, or ControlNet network connected to a PLC-5 controller. The scanner module has Auto Device Replacement, change of state, cyclic I/O, pass-through and slave mode capability.

The number of PLC DeviceNet scanners that can reside in the same I/O chassis is limited only by the I/O chassis size, power supply capacity, and available memory.

Cat. No.	Function	Comm. Rate	Connections	Design Considerations	Cable	Power Dissipation, Max.	Backplane Current Load
1771-SDN	Interfaces a local PLC-5 controller to a maximum of 2 DeviceNet networks	125K 250K 500K	63 connections per DeviceNet channel	Place in the local I/O chassis	1771-CD 10-pin linear plug, 1787-PLUG10R	6.3W	1.2A

Serial Network

The PLC-5 serial port is configurable for RS-232, RS-423, or RS-422A compatible serial communication. Use the serial port to connect devices that:

- communicate using the DF1 protocol, such as modems, communication modules, programming workstations, or other serial devices.
- send and receive ASCII characters, such as ASCII terminals, bar-code readers, and printers.

When configured for system mode, the serial port supports the DF1 protocol. Use system mode to communicate with others devices on the serial link. You can select a DF1 mode:

Use this DF1 Mode	For
point-to-point	<ul style="list-style-type: none"> • communication between a PLC-5 controller and other DF1-compatible devices. • in point-to-point mode, the PLC-5 controller uses DF1 full-duplex protocol.
DF1 master	<ul style="list-style-type: none"> • control of polling and message transmission between the master and each remote node. • in master mode, the PLC-5 controller uses DF1 half-duplex polled protocol.
DF1 slave	<ul style="list-style-type: none"> • using the controller as a slave station in a master/slave serial network. • in slave mode, the PLC-5 controller uses DF1 half-duplex protocol.

The serial port (in system mode) also supports supervisory control and data acquisition (SCADA) applications. SCADA systems let you monitor and control remote functions and processes using serial communication links between master and slave locations.

Cat. No.	Function	Comm. Rate	Connections	Design Considerations	Cable	Power Dissipation, Max.	Backplane Current Load
1771-DA	Interfaces a PLC-5 controller and a peripheral device that generates ASCII characters	configurable, depending on serial protocol	RS-232-C Current loop, 20mA	Place in the local I/O chassis	Custom 26-pin cable*	6.8W	1.3A

* See the *Enhanced and Ethernet PLC-5 Programmable Controllers User Manual*, publication 1785-6.5.12.

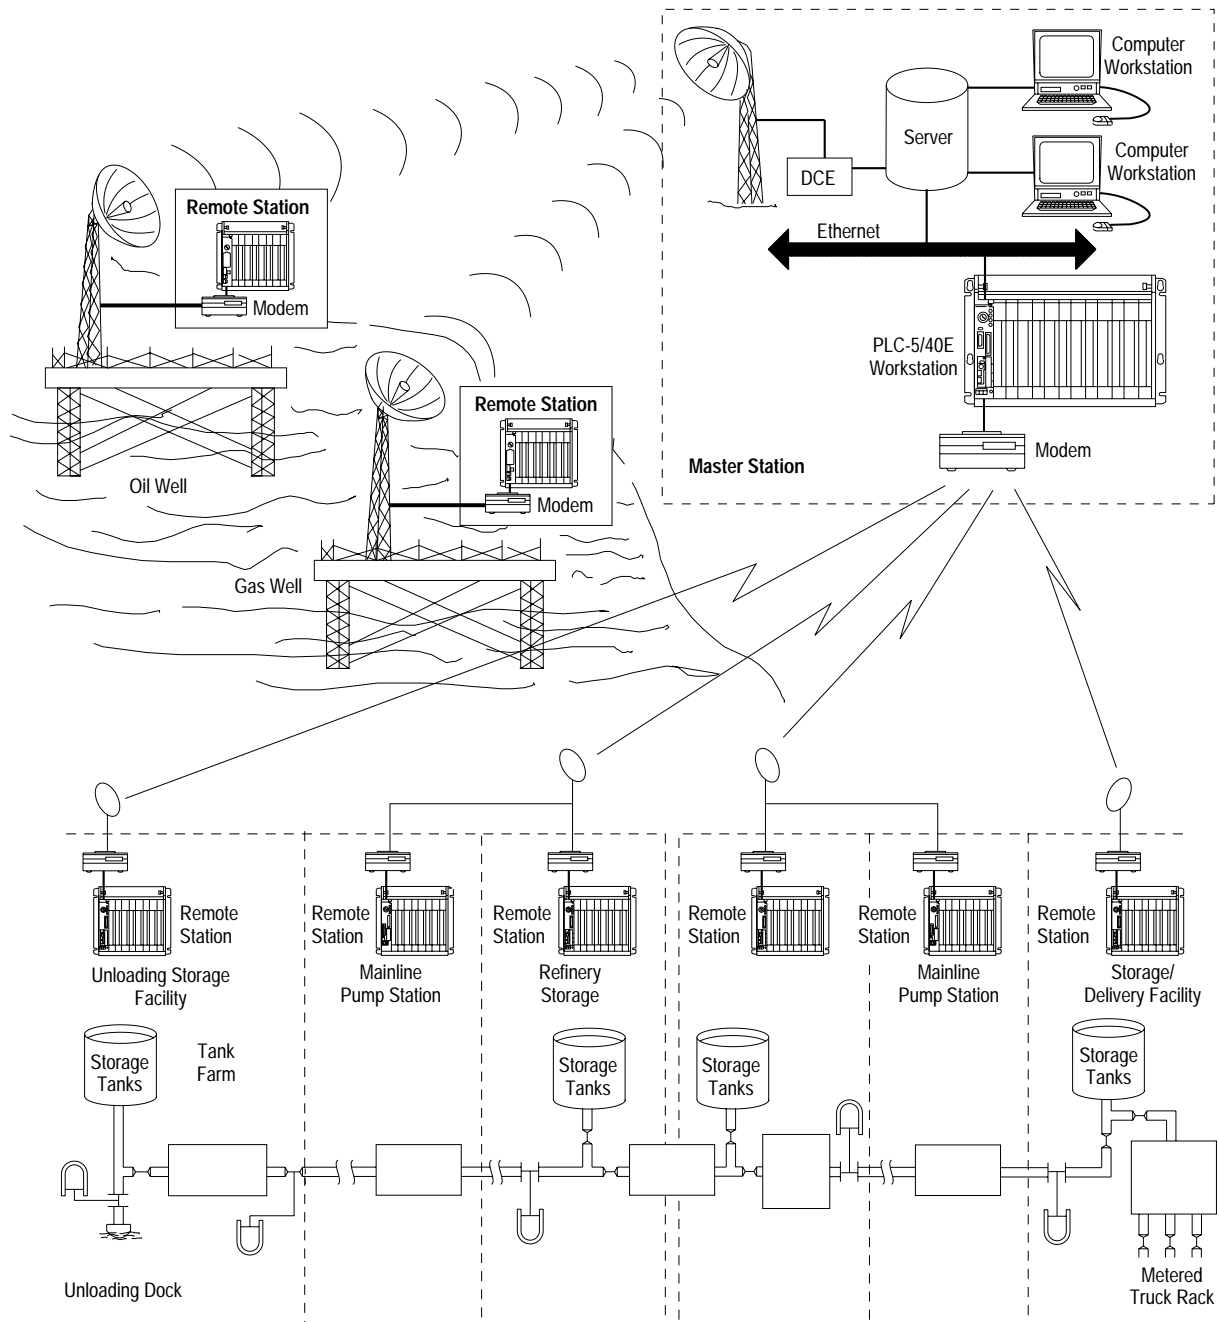

The PLC BASIC Module occupies one slot in the 1771 I/O chassis and runs user-written BASIC and C programs. These programs are independent of your PLC-5 controller and provide an easy and fast interface between a PLC-5 controller, 1771 backplane and RS-232, -422 or -485 devices. The module can also communicate with a remote SLC controller or remote device on the DH-485 network through a DH-485 port.

Cat. No.	Function	Comm. Rate	Connections	Design Considerations	Cable	Power Dissipation, Max.	Backplane Current Load
1771-DB	Provides an interface between a PLC-5 controller, 1771 backplane and RS-232, -422 or -485 devices	configurable, depending on serial protocol	<ul style="list-style-type: none"> 2 ports for RS-232, -422 or -485 1 port for DH-485 	Place in the local I/O chassis	<ul style="list-style-type: none"> Data Highway 1770-CD RS-232 1770-CG or Modem Interface Cable 1770-CP 	4W	.75A (with 1747-PIC) .65A

The communication controller modules, 1771-KE and 1771-KF link intelligent RS-232-C devices to Data Highway. Both of these modules provides a choice of two protocols on the RS-232-C link - full duplex and half duplex. These modules perform the same functions, however their mounting styles and power supply requirements are different.

Cat. No.	Function	Comm. Rate	Connections	Design Considerations	Cable	Power Dissipation, Max.	Backplane Current Load
1771-KE	Provides an interface between RS-232-C devices and Data Highway link with both full and half duplex protocols	<ul style="list-style-type: none"> Data Highway - 57K bps RS-232-C from 110 to 19Kbps 	Data Highway, RS-232	Place in the local I/O chassis. Power source is the 1771 I/O chassis power supply.	<ul style="list-style-type: none"> Data Highway 1770-CD RS-232 1770-CG or Modem Interface Cable 1770-CP 	6.3W	1.2A
1771-KF	Provides an interface between RS-232-C devices and Data Highway link with both full and half duplex protocols	<ul style="list-style-type: none"> Data Highway - 57K bps RS-232-C from 110 to 19Kbps 	Data Highway, RS-232	Includes mounting bracket for external mounting or in a standard industrial enclosure (NEMA Type 12 or similar). Power source is user-supplied (1771-P2 or similar).	<ul style="list-style-type: none"> Data Highway 1770-CD RS-232 1770-CG or Modem Interface Cable 1770-CP 	6.3W	1.2A

When configured for user mode, the serial port supports ASCII devices. Use the PLC-5 ASCII instructions to send and receive information from these devices.

Data Highway Plus

The Data Highway Plus (DH+) network is a local area network designed to support remote programming and data acquisition for factory-floor applications. You can also use DH+ communication modules to implement a small peer-to-peer network.

You can use a DH+ network for data transfer to other PLC-5 controllers or high-level computers and as a link for programming multiple PLC-5 controllers. A PLC-5 controller can communicate over a DH+ network with other controllers and with a workstation.

The DH+ network supports daisy chain and trunkline-dropline configurations.

Cat. No.	Function	Comm. Rate	Connections	Design Considerations	Cable	Power Dissipation, Max.	Backplane Current Load
1785-KA	Provides an interface between Data Highway Plus and Data Highway-485 link	<ul style="list-style-type: none"> DH+ 57K bps DH-485 configurable 	DH+ DH-485	Place in the local chassis	<ul style="list-style-type: none"> Data Highway 1770-CD RS-232 1770-CG or Modem Interface Cable 1770-CP 	10.5W	2.0A
1785-KE	Provides an interface between Data Highway Plus and RS-232-C link	<ul style="list-style-type: none"> DH+ 57K bps RS-232-C configurable 	DH+ RS-232-C	Place in the local chassis	<ul style="list-style-type: none"> Data Highway 1770-CD RS-232 1770-CG or Modem Interface Cable 1770-CP 	6.3W	1.2A

Universal Remote I/O

The strength and versatility of the Universal Remote I/O network comes from the breadth of products it supports. In addition to 1771 I/O, the Universal Remote I/O network supports many Rockwell Automation and third-party devices.

Typical applications range from simple I/O links with controllers and I/O, to links with a variety of other devices. You connect devices through remote I/O adapter modules or built-in remote I/O adapters.

Using the Universal Remote I/O network instead of direct-wiring a device over a long distance to a local I/O chassis helps reduce installation, start-up, and maintenance costs by placing the I/O closer to the sensors and actuators.

Some devices like PLC-5 support “Pass-Through,” which lets you configure devices on a Universal Remote I/O network from an Ethernet, ControlNet or Data Highway Plus network.

Cat. No.	Function	Comm. Rate	Connections	Design Considerations	Cable	Power Dissipation, Max.	Backplane Current Load
1771-ASB	Interfaces I/O modules in an I/O chassis to a remote scanner port across a Universal Remote I/O link	57.6Kbps 115Kbps 230Kbps	Universal Remote I/O adapter port	Place in a remote chassis. Requires a PLC-5 controller that supports Universal Remote I/O	1770-CD Belden 9463	5.2W	1.0A
1771-DCM	Provides a remote I/O adapter port for a local PLC-5 controller to communicate with a remote I/O scanner port of a supervisory process across a Remote I/O link	57.6Kbps 115.2Kbps	Universal Remote I/O adapter port	Place in the local chassis	1770-CD Belden 9463	6.3W	1.2A

Selecting Controllers

Step 3 - Select:

- Enhanced PLC-5 Controllers
- Ethernet PLC-5 Controllers
- ControlNet PLC-5 Controllers
- Protected PLC-5 Controllers
- EEPROM Memory Modules
- Replacement Batteries

PLC-5 controllers are high-speed, single-slot controllers you can use for control and information processing. PLC-5 controllers are designed for larger sequential and regulatory control applications with specialized I/O requirements and/or the need to coordinate with other controllers and devices.

PLC-5 controllers come with different memory sizes and network connections. The Enhanced PLC-5 controllers offer a standard set of functions and communication options. The other PLC-5 controllers offer different communication options, while maintaining the same functions. Choose the controller that best meets your needs:

If Your Application Requires	Select From
<ul style="list-style-type: none"> • connectivity to a large number of Universal Remote I/O devices • connectivity to a large number of DH+ devices 	Enhanced PLC-5 Controllers see page 32
<ul style="list-style-type: none"> • EtherNet/IP connectivity • communication with other Ethernet PLC-5 controllers and host computers 	Ethernet PLC-5 Controllers see page 32
<ul style="list-style-type: none"> • high-speed communication for control and information processing • deterministic, repeatable data transfers • ControlNet connectivity 	ControlNet PLC-5 Controllers see page 33
<ul style="list-style-type: none"> • limited access to critical or proprietary areas of programs • selectively access to processor memory and I/O elements • restricted use of processor operations 	Protected PLC-5 Controllers see page 35

Enhanced PLC-5 Controllers

Every PLC-5 controller offers built-in, configurable ports for Data Highway Plus (DH+) or Universal Remote I/O. A DH+ connection supports remote programming and information access, in addition to peer-to-peer communication between the PLC-5, other controllers and devices.

A Universal Remote I/O connection supports real-time data exchange for I/O, operator interface, and other third-party devices.

Cat. No.	Maximum User Memory (words)	Total I/O Maximum	Channels	Maximum Number of I/O Chassis				Power Dissipation, Maximum	Backplane Current Load
				Total	Extended -Local	Remote	ControlNet		
1785-L11B	8K	512 any mix or 384 in + 384 out (complement)	1 DH+/remote I/O	5	0	4	0	12W	2.3A
1785-L20B	16K	512 any mix or 512 in + 512 out (complement)	1 DH+ 1 DH+/remote I/O	13	0	12	0	12W	2.3A

1785-L40B	48K	2048 any mix or 2048 in + 2048 out (complement)	4 DH+/remote I/O	61	0	32 max/link	0	17.3W	3.3A
1785-L60B	64K	3072 any mix or 3072 in + 3072 out (complement)	4 DH+/remote I/O	93	0	32 max/link	0	17.3W	3.3A
1785-L80B	100K	3072 any mix or 3072 in + 3072 out (complement)	4 DH+/remote I/O	93	0	32 max/link	0	17.3W	3.3A

Ethernet PLC-5 Controllers

The Ethernet PLC-5 controller integrates the Allen-Bradley architecture into an industry-standard EtherNet/IP system, offering a flexible and open solution.

With the Ethernet PLC-5 controller's built-in communication capabilities, your entire enterprise can use standard Ethernet or Internet connectivity to control and monitor production. Using the Internet and Web browser, you can create your own custom Web pages to provide executive summaries of process information. These pages are accessible to any Internet user who has network access to the PLC-5 processor. The embedded Web server provides access to PLC-5 diagnostics. Domain Name Service (DNS) and Simple Network Management Protocol (SNMP) are also supported.

Cat. No.	Maximum User Memory (words)	Total I/O Maximum	Channels	Maximum Number of I/O Chassis				Power Dissipation, Max.	Backplane Current Load
				Total	Extended -Local	Remote	ControlNet		
1785-L20E	16K	512 any mix or 512 in + 512 out (complement)	1 Ethernet 1 DH+ 1 DH+/remote I/O	13	0	12	0	19W	3.6A
1785-L40E	48K	2048 any mix or 2048 in + 2048 out (complement)	1 Ethernet 2 DH+/remote I/O	61	0	60	0	19W	3.6A
1785-L80E	100K	3072 any mix or 3072 in + 3072 out (complement)	1 Ethernet 2 DH+/remote I/O	65	0	64	0	19W	3.6A

ControlNet PLC-5 Controllers

The ControlNet PLC-5 controller offers embedded ControlNet communication capabilities for control and information processing. The ControlNet network provides both I/O control and peer-to-peer communications on a 5Mbps network, with repeatability and determinism.

You can have multiple ControlNet PLC-5 controllers on one ControlNet network, with each controller handling its own I/O on the network, and at the same time communicating with each other. Multiple controllers can receive input data from one I/O or device node.

Cat. No.	Max. User Memory (words)	Total I/O Maximum	Channels	Maximum Number of I/O Chassis			ControlNet I/O Map Entries	Power Dissipation, Max.	Backplane Current Load

Protected PLC-5 Controllers

The Protected PLC-5 controller lets you limit access to critical or proprietary areas of programs, selectively guard controller memory and I/O, or restrict use of controller operations. The distinctive safety-yellow labels on the controller identify the protected PLC-5 controller.

Use the programming software to assign class privileges to specific user accounts or a user's job function, such as system administrator, plant engineer, maintenance engineer, or operator. Using four privilege classes and associated passwords, you can limit access to critical areas of programs and restrict access to:

- communication channels
- remote nodes attached to the ControlNet or DH+ network
- program files
- data files

The protected PLC-5 controller expands system validity and security beyond that provided by the password-and-privilege feature of the other PLC-5 controllers. The Rockwell Automation clutch/brake application package combines the protected PLC-5 controller with specially-designed software to support stamping press applications.

Cat. No.	Maximum User Memory (words)	Total I/O Maximum	Channels	Maximum Number of I/O Chassis			ControlNet I/O Map Entries	Power Dissipation, Max.	Backplane Current Load
				Total	Extended -Local	Remote

Backing up Controller Memory

You can back up program files using an EEPROM module. This EEPROM module comes in four sizes:

Cat. No.	Provides this Amount of Backup Memory
1785-ME16*	16K words
1785-ME32	32K words
1785-ME64	64K words
1785-ME100	100K words
1785-CHBM	100K words
*Not for use with ControlNet PLC-5 controllers.	

Battery Replacement and Life Estimates

Cat. No.	Applies to	When Used in this Contoller	At this Temperature	Battery Life Estimate	
				Power off 100%	Power off 50%
1770-XYC	All PLC-5 Programmable Controllers	PLC-5/11, -5/20 and -5/20E	60°C	256 days	1.4 years
			25°C	2 years	4 years
		All Others	60°C	84 days	150 days
			25°C	1 year	1.2 years

Selecting Chassis

1771 Chassis

Step 4 - Select Chassis:

- with the number of slots you need
- that meet your power supply requirements
- that meet your panel size and space limitations

The PLC-5 programmable controller requires a 1771 chassis to contain the various modules. Chassis are available in sizes of 1, 2, 4, 8, 12, and 16 module slots.

The backplane provides a communication path between the I/O modules and either the controller or the I/O adapter module.

The consistent size and mounting of the available 1771 chassis provide a “universal” configuration for system design and chassis-mounting configurations. If you anticipate that your system will expand, you may want to purchase larger chassis for future expansion.

Cat. No.	Description	No. I/O Slots	Dimensions (H x W x D)	Weight kg (lb)	Mounting Type
1771-A1B	I/O chassis for 1771 I/O modules	4 slots	315 x 229 x 193 mm (12.4 x 9.0 x 7.6 in)	3.6 (8.0)	Back-panel
1771-A2B	I/O chassis for 1771 I/O modules	8 slots	315 x 356 x 193 mm (12.4 x 14.0 x 7.6 in)	4.7 (10.3)	Back-panel
1771-A3B	I/O chassis for 1771 I/O modules	12 slots	339 x 484 x 217 mm (13.5 x 19.0 x 8.5 in)	3.6 (8.0)	19-inch rack or back-panel
1771-A3B1	I/O chassis for 1771 I/O modules	12 slots	315 x 483 x 193 mm (12.4 x 19.0 x 7.6 in)	5.7 (12.6)	Back-panel
1771-A4B	I/O chassis for 1771 I/O modules	16 slots	315 x 610 x 193 mm (12.4 x 24.0 x 7.6 in)	6.7 (14.8)	Back-panel
1771-PSC	Power-supply chassis (for connecting power directly or through a cable to an I/O chassis). Slots for installation of power supplies and modules requiring only power from the backplane.	4 slots	311 x 203 x 180 mm (12.2 x 8.0 x 7.1 in)	1.9 (4.1)	Back-panel
1771-AM1	I/O chassis with integral remote I/O adapter and power supply (3A available for I/O modules)	1 slot	298 x 70 x 187 mm (11.7 x 2.7 x 7.3 in)	1.4 (3.0)	Back-panel
1771-AM2	I/O chassis with integral remote I/O adapter and power supply (3A available for I/O modules)	1 slot	298 x 130 x 187 mm (11.7 x 5.1 x 7.3 in)	2.3 (5.0)	Back-panel

Mounting Dimensions

Minimum spacing requirements for a processor-resident chassis:

- Mount the I/O chassis horizontally.
- Allow 153 mm (6 in) above and below the chassis.
- Allow 102 mm (4 in) on the sides of each chassis.
- Allow 51 mm (2 in) vertically and horizontally between any chassis and the wiring duct or terminal strips.
- Leave any excess space at the top of the enclosure, where the temperature is the highest.

Minimum spacing requirements for a remote I/O and extended-local I/O chassis:

- Mount the I/O chassis horizontally.
- Allow 153 mm (6 in) above and below all chassis. When you use more than one chassis in the same area, allow 152.4 mm (6 in) between each chassis.
- Allow 102 mm (4 in) on the sides of each chassis. When you use more than one chassis in the same area, allow 101.6 mm (4 in) between each chassis.
- Allow 51 mm (2 in) vertically and horizontally between any chassis and the wiring duct or terminal strips.
- Leave any excess space at the top of the enclosure, where the temperature is the highest.

**Step 5 - Select :**

- One power supply for each chassis

Selecting Power Supplies

The 1771 power supplies provide 5V dc power directly to the chassis backplane. These power supplies occupy one or two slots in a 1771 chassis and can provide up to 8 amps per supply to the I/O chassis.

These power supplies require no space outside the chassis (except for 1771-P7P). The 1771 power supplies connect directly to the chassis backplane and can be paralleled to provide greater current. Redundancy is available for greater availability.

Cat. No.	Nominal Input Voltage	Input Voltage Range	Max. Real Input Power	Max. Apparent Input Power	Max. Transformer Load	User Output Current	Backplane Output Current	Frequency	Location, No. of Slots

For more information, see the *1771 I/O Chassis and Power Supplies Product Data*, publication 1771-2.185.

Power Requirements and Transformer Sizing

Each ac input power supply generates a shutdown signal on the backplane whenever the ac line voltage drops below its lower voltage limit. It removes the shutdown signal when the line voltage comes back up to the lower voltage limit. This shutdown is necessary to help ensure that only valid data is stored in memory.

The external transformer rating (in VA) of each power supply is greater than its real input power (in watts) because a capacitor-input ac/dc supply draws power only from the peak of the ac voltage wave form. If the transformer is too small, it clips the peak of the sine wave, when the voltage is still above the lower voltage limit, the power supply will sense this clipped wave form as low voltage and could prematurely shut down modules in the chassis.

The following graphs display the backplane power load on the vertical axis. Since these supplies have multiple outputs, the backplane power load is given in watts.

- Use the real power value in watts for determining the amount of heat dissipation you will have inside the enclosure
- Use the apparent power value in VA for estimating power distribution sizing
- Use the transformer load value in VA of each power supply plus all other loads on a transformer to determine the required transformer size

Notes

Step 6 - Select:

- RSLogix 5 Programming Software
- RSLinx Software
- RSNetWorx Network Configuration Software
- RSLogix Emulate 5 Emulation Software
- PLC-5 Controller and Training Software
- ViewAnyWare Products

Selecting Software

Your selection of communication modules and network configuration determines what software packages you need to configure and program your system.

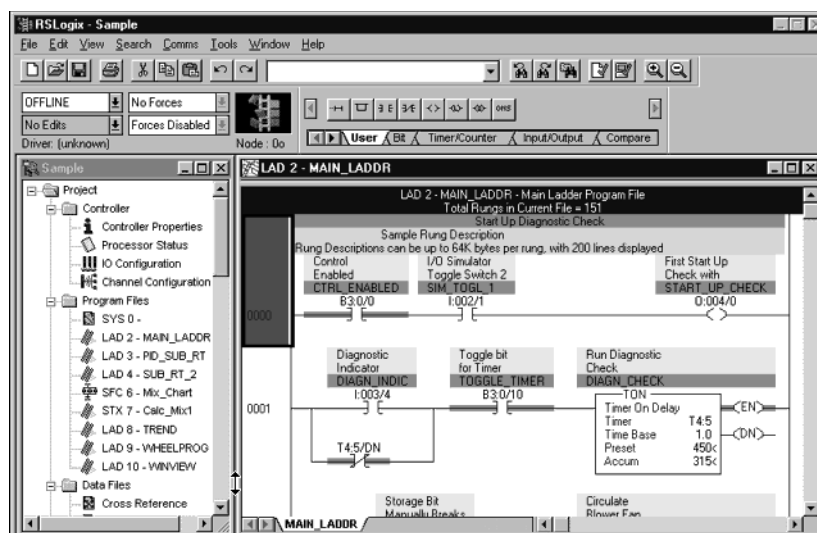

The PLC-5 controllers support multiple industry-standard programming languages. You can program in structured text, function block, sequential function charts, or ladder logic. This versatility means you can maintain and troubleshoot programs in the same language that you develop them.

To Use a	You Need	Order this Cat. No.
PLC-5 Programmable Controller	RSLogix 5 software	9234-RL5300END (diskette) or 9234-RL5300ENE (CD)
PLC-5 Programmable Controller on ControlNet	RSLogix 5 with RSNetWorx for ControlNet software	9234-RWCNTENE (RSLogix 5 plus RSNetWorx for ControlNet)
1771-SDN DeviceNet Scanner Module	RSLogix 5 with RSNetWorx for DeviceNet software	9234-RWCNTENE (RSLogix 5 plus RSNetWorx for DeviceNet)
PLC-5 Programmable Controller on Ethernet or 1785 Ethernet Sidecar Module (set the IP address)	RSLinx software (RSLinx Lite and Bootp server come with RSLogix 5 software)	9234-RL5300END (on diskette) or 9234-RL5300ENE (on CD)
PLC-5 Programmable Controller on Data Highway or Remote I/O (define the DH+ routing table)		
PLC-5-based system you want to emulate	RSLogix Emulate™ 5 software	9324-RL350END (RSLogix 5 plus RSLogix Emulate 5)
PLC-5 Programmable Controller using SLC and MicroLogix products	RSLogix 500™ software	9234-RLC300END (diskette) or 9234-RLC300ENE (CD) (RSLogix 5 plus RSLogix 500)
PLC-5-based system with SLC and MicroLogix products you want to emulate	RSLogix Emulate 500 software	9324-RLC350END (RSLogix 5 plus RSLogix Emulate 500)
Operator interface	RSView32™ software	ViewAnyWare products
Communication card in a workstation	RSLinx software (RSLinx Lite comes with RSLogix 5 software)	9234-RL5300END (on diskette) or 9234-RL5300ENE (on CD)
PLC-5 system with an integrated modular approach for system maintenance	Rockwell Software Maintenance Automation Control Center (RSMACC™) software	RSMACC products
PLC-5 system with program maintenance across hardware platforms	RSLogix 5 Professional software	9324-RL5700NXENE
PLC-5 system with pre-installation and startup control system testing	RSTestStand™ software	9310-TSTNDENE

Programming Software

Use RSLogix 5 programming software to configure 1771 I/O and communication modules and to program the PLC-5 programmable controller. RSLogix 5 offers relay ladder, structured text, function block diagram, and sequential function chart editors for you to develop application programs.

RSLogix 5 Software Requirements

Description	Minimum	Recommended
Personal computer	Intel Pentium™ 100 MHz	Intel Pentium III 700 MHz
Software requirements	Supported: <ul style="list-style-type: none"> • Microsoft® Windows™ XP • Microsoft Windows 2000 • Microsoft Windows NT™ version 4.0 with Service Pack 3 or greater • Microsoft Windows ME • Microsoft Windows 98 	
RAM	64 Mbytes	256 Mbytes
Hard disk space	100 Mbytes (or more, based on application requirements)	
Video requirements	256-color VGA graphics adapter, 800 x 600 resolution	True Color 1024 x 768 resolution

RSLinX Software

RSLink software (9355 series) is a communication server package that provides plant-floor device connectivity for a wide variety of applications. RSLink can support multiple software applications simultaneously communicating to a variety of devices on many different networks.

RSLink provides a user-friendly graphical interface for navigating through your network. Select a device and click to access a variety of integrated configuration and monitoring tools. A complete set of communication drivers is provided for your networking needs, including Allen-Bradley networks.

RSLink is available in multiple packages to meet the demand for a variety of cost and functionality requirements.

RSLink System Requirements

Description	Value
Personal computer	Intel Pentium 100 MHz (faster processor improves performance)
Software requirements	Supported: <ul style="list-style-type: none"> • Microsoft Windows XP • Microsoft Windows 2000 • Microsoft Windows NT version 4.0 with Service Pack 3 or greater • Microsoft Windows ME • Microsoft Windows 98
RAM	32 Mbytes minimum 64 Mbytes recommended
Hard disk space	35 Mbytes (or more, based on application requirements)
Video requirements	16-color VGA graphics display, 800 x 600 or greater resolution

In most cases, RSLink Lite software comes bundled with controller programming packages.

Network Configuration Software

RSNetWorx software for ControlNet (9324-CNETL3) and RSNetWorx for DeviceNet (9324-DNETL3) are the configuration and scheduling tools for your ControlNet or DeviceNet networks. RSNetWorx software lets you create a graphical representation of your network configuration and configure the parameters that define your network.

RSNetWorx for ControlNet software schedules network components. The software automatically calculates network bandwidth for the entire network, as well as the bandwidth used by each network component. You must have RSNetWorx software to configure and schedule the ControlNet networks in your PLC-5 programmable controller system.

RSNetWorx for DeviceNet software configures the DeviceNet I/O devices and creates the scan list. The 1771-SDN DeviceNet scanner module stores the configuration information and scan list.

RSNetWorx System Requirements

Description	ControlNet	DeviceNet	EtherNet/IP
Personal computer	Intel Pentium or Pentium-compatible		
Software requirements	Supported: <ul style="list-style-type: none"> • Microsoft Windows XP • Microsoft Windows 2000 Terminal Server • Microsoft Windows NT version 4.0 with Service Pack 6 or greater • Microsoft Windows ME • Microsoft Windows 98 		
RAM	32 Mbytes minimum more memory is required for large networks		
Hard disk space	Minimum: 115 Mbytes (includes program files and hardware files) Full support: 168...193 Mbytes (includes program files, online help, tutorial, and hardware files)	Minimum: 190 Mbytes (includes program files and hardware files) Full support: 230...565 Mbytes (includes program files, online help, tutorial, and hardware files)	Minimum: 108 Mbytes (includes program files and hardware files) Full support: 115...125 Mbytes (includes program files, online help, tutorial, and hardware files)
Video requirements	16-color VGA graphics adapter, 640 x 480 resolution minimum, 800 x 600 resolution recommended		
Other	RSLinx Lite 2.4 or later to use RSNetWorx online	RSLinx Lite 2.4 or later to use RSNetWorx online	RSLinx Lite 2.41 or later to use RSNetWorx online

RSLogix Emulate 5 Software

RSLogix Emulate 5 (9324-RL5350END) is the software emulation package for the PLC-5 programmable controllers. RSLogix Emulate 5 used in conjunction with RSLogix 5 software lets you run and debug your application code while at your computer. In addition, RSLogix Emulate 5 also lets you test HMI screens, developed in RSView32 for example, without the need to connect to a real controller.

By using RSLogix Emulate 5, you can eliminate the cost for dedicated test ware, improve your productivity, and reduce the time to market of your products.

RSLogix Emulate 5 gives you enhanced debug capabilities. You can set tracepoint and breakpoint instructions (ladder diagram only) in your application code, use traces, and also vary the execution speed of the emulator. RSLogix Emulate 5 supports all the programming languages (ladder diagram, function block diagram, structured text, and sequential function chart). RSLogix Emulate 5 does not allow control of real I/O.

RSLogix Emulate 5 System Requirements

Description	Value
Personal computer	IBM-compatible Intel Pentium II 300 MHz or Celeron 300A (Pentium III 600 MHz recommended)
Software requirements	Supported: <ul style="list-style-type: none"> • Microsoft Windows XP with Service Pack 1 or greater • Microsoft Windows 2000 with Service Pack 2 or greater • Microsoft Windows NT version 4.0 with Service Pack 6A or greater
RAM	128 Mbytes minimum
Hard disk space	50 Mbytes
Video requirements	16-color VGA graphics display, 800 x 600 or greater resolution

PLC-5 Controller and Training Software

Rockwell Automation offers several different levels of training for your PLC-5 programmable controller system. While most of these training aids are PLC-5 specific, the lessons and tools also apply to other platforms.

- instructor-based training
- computer-based training
- workstation simulator
- job aids

Instructor-based Training

The instructor-based courses are best suited for people new to the PLC-5 architecture and for those new to programmable controllers.

Course Number	Description
CCPS65	SLC 500/PLC-5 Communications
CCP409	PLC-5 Advanced Maintenance & Troubleshooting
CCP504	RSLogix 5/500
CCP412	PLC-5 Maintenance & Troubleshooting
CCP410	PLC-5 Programming
CCP411	PLC-5 Advanced Programming
CCP122	PLC-5/SLC 500 Fundamentals Using RSLogix

Computer-based Training

The computer-based training programs are designed to provide the essential introductory information needed for using the product. Computer-based training is best used as a resource following an instructor-based course.

Course Title	Description
RSTrainer™ 2000 for RSLinx	Detailed instruction of RSLinx and its communication capabilities
RSTrainer 2000 for RSLogix 5	Teaches ladder-logic development, documentation and troubleshooting using RSLogix 5

1771 I/O Rack System Workstation

The PLC-5 workstation simulator (ABTTDPLC1) is an engineering support tool that you can integrate into your training and development program. Designed for use with the Universal I/O Simulator, this rugged workstation precisely simulates the mid-size PLC-5, and other programmable controller families. The simulator includes:

- PLC-5/40 processor
- 12-slot I/O chassis
- Single-slot power supply
- Digital I/O modules
- 3 high-density 10-30V DC input modules
- 3 high-density 10-60V DC output modules
- Intelligent I/O modules
- 1 analog input module
- 1 analog output module
- 3 empty chassis slots
- Hard-shell shipping case

Job Aids

Job aids are useful resources to use in your facility after completing instructor-based and computer-based training.

Job Aid	Description
ABT-1785-TSJ53	RSLogix 5 Version 4.0 Procedures Guide for PLC-5 Systems
ABT-1785-DRG70	PLC-5 Documentation Reference Guide
ABT-1785-TSJ22	PLC-5 Troubleshooting Guide Using RSLogix 5 Series Software

ViewAnyWare Products

ViewAnyWare products, together with Logix for control and NetLinx architecture for communication, make up Rockwell Automation's Integrated Architecture strategy. The ViewAnyWare strategy combines Rockwell Automation's expertise in Allen-Bradley electronic operator interface and industrialized PC hardware with Rockwell Software's supervisory control software. Current ViewAnyWare products include:

- RSVIEW® Enterprise Series software
- PanelView™ Plus operator interface
- VersaView® industrial computers and monitors
- VersaView CE industrial computer

RSView Enterprise Series Software

RSView Enterprise Series from Rockwell Software is a line of HMI software products designed with a common look, feel and navigation to help speed HMI application development and training time. With RSVIEW Enterprise Series 3.0, you can reference existing Logix data tags. Any changes made to these referenced tags are automatically inherited by RSVIEW. RSVIEW Enterprise Series software includes:

- RSVIEW Studio lets you create applications in a single design environment. It configures Supervisory Edition, Machine Edition, VersaView CE, and PanelView Plus. It supports editing and reusing projects for improved portability between embedded machine and supervisory HMI systems, saving development time and reducing engineering and training costs.
- RSVIEW Machine Edition™ (ME) is a machine-level HMI product that supports both open and dedicated operator interface solutions. It provides a consistent operator interface across multiple platforms (including Microsoft Windows CE, Windows 2000/XP, and PanelView Plus solutions), and is ideal for monitoring and controlling individual machines or small processes.
- RSVIEW Supervisory Edition™ (SE) is an HMI software for supervisory-level monitoring and control applications. It has a distributed and scalable architecture that supports distributed-server/multi-user applications. This highly-scalable architecture can be applied to a stand-alone, one-server/one-user application or to multiple users interfacing with multiple servers.

The available RSVIEW Enterprise Series products are:

RSView Enterprise Series Product Line	Cat. No.	Description
RSView Studio	9701-VWSTENE	RSView Studio for RSVIEW Enterprise Series
	9701-VWSTMENE	RSView Studio for Machine Edition
RSView Machine Edition	9701-VWMR015AENE	RSView ME Station runtime for Windows 2000, 15 displays
	9701-VWMR030AENE	RSView ME Station runtime for Windows 2000, 30 displays
	9701-VWMR075AENE	RSView ME Station runtime for Windows 2000, 75 displays
RSView Supervisory Edition	9701-VWSCWAENE	RSView SE client
	9701-VWSCRAENE	RSView SE view client
	9701-VWSS025AENE	RSView SE server 25 displays
	9701-VWSS100AENE	RSView SE server 100 displays
	9701-VWSS250AENE	RSView SE server 250 displays
	9701-VWSS000AENE	RSView SE server unlimited display
	9701-VWVB025AENE	RSView SE station 25 displays
	9701-VWVB100AENE	RSView SE station 100 displays
	9701-VWVB250AENE	RSView SE station 250 displays
	9701-VWVB000AENE	RSView SE station unlimited display

PanelView Plus Operator Interface

PanelView Plus is ideal for applications with a need to monitor, control and display information graphically, allowing operators to quickly understand the status of their application. PanelView Plus is programmed with RSVIEW Studio and has embedded RSVIEW Machine Edition functionality. It combines the best features from the popular Allen-Bradley PanelView Standard and PanelView "e" operator interface products and adds new functionality including:

- multi-vendor communications
- trending
- expressions
- data logging
- animation
- RSVIEW Studio direct browsing of RSLogix™ 5000 addresses

VersaView Industrial Computers and Monitors

VersaView is a family of industrial computer and monitor solutions, comprised of integrated display computers, workstations, non-display computers and flat panel monitors. VersaView products offer effortless management of changing technology, a rugged but cost-effective design, and easier product configuration. All VersaView products provide the latest industrial solutions available, optimized for visualization, control, information processing, and maintenance application. RSVIEW ME, RSVIEW SE client, and RSVIEW SE server runtimes are installed (separate activation is required).

VersaView CE Industrial Computers

VersaView CE is an open Windows CE terminal with a Windows desktop environment - bringing together features of operator interfaces and industrial computers. It is a high-performance computer with a compact flash drive and integrated RSVIEW Machine Edition runtime (no activation required). There's no hard disk, no fan and no moving parts which means maximum reliability on the plant floor. Easy to set up and maintain, VersaView CE means an open system that's rugged and economical, offering high functionality in an easy to use package.

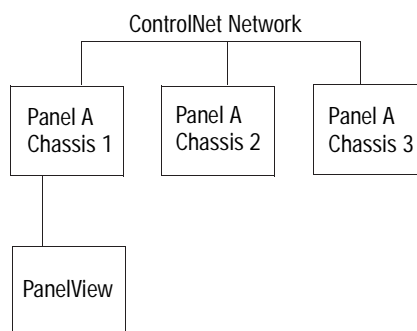

MobileView Portable HMI

The MobileView™ family of portable HMI products lets personnel move around a machine or down a production line throughout the entire plant, resulting in greater worker and plant productivity. The MobileView interfaces let manufacturers have information and machine control wherever it is required. MobileView Machine and MobileView Guard™ terminals are available with RSVIEW Machine Edition running locally, eliminating the need for a server. Or, MobileView terminals act as thin clients to computer applications, such as RSVIEW Supervisory Edition, to easily integrate into new or existing control architectures.

Summary

Use a spreadsheet to record the amount and type of devices your PLC-5 system needs. For example, this sample system:

could result in this spreadsheet:

Device	Number of I/O Points Needed	Cat. No.	I/O Points per Module	Number of Modules
120V ac digital inputs	76	1771-IAD	16	5
120V ac digital outputs	27	1771-OD16	16	2
24V dc digital inputs	40	1771-IQ	8	5
24V dc digital outputs	13	1771-OB	8	2

As you select devices for your PLC-5 system, keep in mind the sections/steps in this selection guide:

Step	Select	From
1	I/O	<ul style="list-style-type: none">• 1771 I/O Modules• 1746 I/O Modules• 1794 FLEX I/O Modules• 1797 FLEX Ex I/O Modules• 1791D CompactBlock I/O Modules• Encompass Partner Program I/O Modules
2	Networks	<ul style="list-style-type: none">• EtherNet/IP Protocol• ControlNet Network• DeviceNet Network• Serial Network• Data Highway Plus• Universal Remote I/O
3	Controllers	<ul style="list-style-type: none">• Enhanced PLC-5 Controllers• Ethernet PLC-5 Controllers• ControlNet PLC-5 Controllers• Protected PLC-5 Controllers• EEPROM Memory Modules• Replacement Batteries
4	Chassis	<ul style="list-style-type: none">• chassis with the number of slots you need• chassis that meet your power supply requirements• chassis that meet your panel size and space limitations
5	Power Supplies	<ul style="list-style-type: none">• one power supply for each chassis
6	Software	<ul style="list-style-type: none">• RSLogix 5 Programming Software• RSLinx Software• RSNetWorx Network Configuration Software• RSLogix Emulate 5 Emulation Software• PLC-5 Controller and Training Software• ViewAnyWare Products

As you determine placement of the modules you need, use the worksheet on the next page to record your choices. Make a copy of this worksheet for each chassis.

Notes

Instruction Set

The PLC-5 controller supports multiple industry-standard programming languages. You can program logic in IEC 1131-based structured text, function block, and these built-in ladder logic instructions:

Instruction Family	Description
relay-type	The bit (relay-type) instructions monitor and control the status of bits. XIC, XIO, OTE, OTL, OTU, IIN, IOT, IDI, IDO
timer and counter	The timer and counter instructions control operations based on time or the number of events. TON, TOF, RTO, CTU, CTD, RES
compare	The compare instructions compare values by using an expression or a specific compare instruction. CMP, EQU, GEQ, GRT, LEQ, LES, LIM, MEQ, NEQ
compute	The compute/math instructions evaluate arithmetic operations using an expression or a specific arithmetic instruction. CPT, ACS, ADD, ASN, ATN, AVE, CLR, COS, DIV, LN, LOG, MUL, NEG, SIN, SQ, SQR, SRT, STD, SUB, TAN, XPY
logical	The logical instructions perform logical operations on bits. AND, NOT, OR, XOR
conversion	The conversion instruction convert integer and BCD values or convert radian and degree values. TOD, FRD, DEG, RAD
bit modify move	The move instructions modify and move bits. BTD, MOV, MVM
file	The file instructions perform operations on file data and compare file data. FAL, FSC, COP, FLL
diagnostic	The diagnostic instructions compare data to help you detect problems. FBC, DDT, DTR
shift	Use the shift instructions to modify the location of data within files. BSL, BSR, FFL, FFU, LFL, LFU
sequencer	Sequencer instructions monitor consistent and repeatable operations. SQO, SQI, SQL
program control	Program flow instructions change the flow of ladder program execution. MCR, JMP, LBL, FOR, NXT, BRK, JSR, SBR, RET, TND, AFI, ONS, OSR, OSF, SFR, EOT, UIE, UID
process control	The process control instruction provides closed-loop control. PID
block-transfer	The block-transfer instructions transfer words to or from other devices. BTR, BTW, CIO
message	The message instruction reads or writes a block of data to another station. MSG
ASCII	The ASCII instruction read, write, compare, and convert ASCII strings. ABL, ACB, ACI, ACN, AEX, AHL, AIC, ARD, ARL, ASC, ASR, AWA, AWT

All PLC-5 programmable controllers listed in this document qualify for the standards illustrated below when product or packaging is marked. See the Product Certification link at www.ab.com/certification for Declarations of Conformity, Certificates and other certification details.

ControlLogix, PLC-5, Rockwell Automation, RSLinx, RSView and VersaView are registered trademarks of Rockwell Automaton, Inc.

Compact I/O, CompactBlock I/O, Data Highway Plus, DH+, Encompass, FLEX Ex, FLEX I/O, MicroLogix, PanelBuilder, PanelView, PanelView Plus, RSLinx Gateway, RSGuardian, RSLogix, RSLogix 5, RSLogix 500, RSLogix 5000, RSLogix Emulate, RSNetWorx, RSNetWorx for ControlNet, RSTestStand, RSTrainer, RSView Machine Edition, RSView Supervisory Edition, SLC 500 and ViewAnyWare are trademarks of Rockwell Automation, Inc.
